

Transferable production: Code documentation webshop

```
button.addEventListener('click', () => {  
  // Decrease quantity when minus button clicked  
  decBtn.addEventListener("click", () => {  
    const item = cartData.get(name);  
    if (!item) return;  
  
    if (item.quantity > 1) {  
      // Reduce quantity and price if more than one  
      item.quantity--;  
      item.totalPrice -= item.pricePerUnit;  
  
      total -= item.pricePerUnit;  
  
      item.quantitySpan.textContent = `${item.quantity}`;  
      item.priceSpan.textContent = `$$${item.totalPrice.toFixed(2)}`;  
      updateCartTotal();  
    } else {  
      // If only there is only one left, remove item from cart completely  
      total -= item.totalPrice;  
      cartItems.removeChild(item.li);  
      cartData.delete(name);  
    }  
  });  
});
```

I use the same Why, How, What, So explanation for all code documentation since my projects share the same structure and purpose.

Why?

I added code documentation to all my projects to make more clear and understandable for others, but also myself.

How?

I went through my code and added comments explaining briefly what blocks of code do. I focused on areas that were more complex, like JS code and made sure to use simple writing to make it easier to understand.

What?

The comments are short descriptions explaining the logic of the code and what the blocks of code do. It helps the reader follow it more easily.

So?

Because of this, my code is now easier to read, follow and understand. It is also easier to debug and it has helped me to make the code more clear.
